

TECHNOLOGY AND INNOVATION

We apply our experience in software and hardware product management, supply chain management, intellectual property strategy, capital markets, data security and privacy, corporate transactions, banking regulation, and international law to assist clients with investing, funding and marketing new services and products across all industry implementations, including fintech, commercial software, consumer software, remote sensing, alternative energy and meshnet systems, SaaS platforms, and domestic and foreign entities launching virtual currencies or products or services built on a blockchain platform. We work closely with clients and patent prosecutors as we oversee patenting and licensing strategies geared toward high ROI. We have experience providing legal services for a broad spectrum of technologies and technology business models, including:

- Software product sales and licensing
- SaaS platform launch and transactions
- Fintech software, devices, systems, and regulatory compliance
- Blockchain software products or services
- GDPR and other international law compliance
- Non-disclosure agreements (NDAs)
- University technology commercialization and licensing agreements
- Fundraising support including term sheet negotiation and due diligence representation

- Hardware products, including industrial sensors, remote sensing, temporary meshnets, and deployed IoT systems
- Alternative energy products
- Cybersecurity risk analysis, insurance policy compliance, and incident response
- Products liability audit assessments
- Regulatory research and compliance for federally, state or locally regulated products and services
